how to deal with them.

Plan the use of the Site Fencing so that it can always be

Site fencing is designed to provide temporary security

This site fencing must be erected properly using the

Site fencing can only be erected safely on level ground

or on ground with a gentle slope; it cannot be erected on

correct number of bases (or feet) and stabilisers.

if not handled and erected carefully and properly.

Site Fencing

The rules and procedures in force where people are at work may require the person responsible for this equipment to carry out a specific risk assessment.

The weight, and the awkward size and shape, of each section of fencing, and of

each concrete or rubber base, can cause injury to people or damage to property

If you have not erected site fencing before, familiarise yourself with how it all fits

If you have no prior instructions regarding fence position and design, decide on the

fence layout before you start work. Try to foresee any problems so that you can plan

You should wear the following items of personal protective equipment: safety boots

(EN345 or BS1870 / 4972); safety helmet - EN397 or BS5240; overalls; strong

Site fencing is designed for erection by a minimum of two able bodied adults.

Anyone with either temporary or permanent disability must seek expert advice

have the force of law and only the courts can authoritatively interpret the law.
