

v

## Using the Pressure Washer

- Wear protective equipment including goggles and waterproof overalls.
- Hold the lance in both hands when squeezing the trigger because the water pressure will make it "kick back".
- Do not aim the water jet at yourself, any other persons, or any animals. It will cause an injury.
- Do not spray the water jet over any electrical equipment. This could cause a short circuit and fire. This could cause a fatal electric shock.
- Stop the engine before leaving the machine unattended.
- Do not connect or disconnect a pressure hose or lance while the washer is pressurised. Stop the engine, and squeeze the lance trigger to release the pressure.
- Stop the engine and squeeze the lance trigger to release the pressure when not in use.
- If working in cold conditions, make sure that the water in the machine will not start to freeze when not in use.
- After work turn the detergent off or remove the detergent feed. Run the washer on just water to flush the detergent out. Then stop the engine, and squeeze the lance trigger to release the pressure.
- Drain the machine if there is any danger, of overnight frost.
- Make sure that all the water filters are cleaned and properly protected before you store the machine.
- If the equipment does not work properly, do not attempt to repair it. Contact the hire company.
